

# Grape King Bio's Biodiversity and No Deforestation Commitment

September 2024

Grape King Bio recognizes the pivotal role of sustainable development in safeguarding ecosystems for future generations. Aligned with the United Nations Convention on Biological Diversity and Sustainable Development Goals, we are committed to upholding the values of biodiversity and no deforestation. We call upon stakeholders to collaborate in ongoing efforts to protect marine and terrestrial ecosystems.

## Commitment

At our operational sites by 2050, we commit to achieving no net loss and net positive impact on biodiversity, to cease all deforestation activities and aim for no net deforestation through reforestation initiatives. This commitment extends to reducing environmental impacts within our own operations, suppliers and partners (value chain), and refraining from operating near sites containing globally or nationally important biodiversity.

## Strategies

- Our operational activities mandate that the value chain avoids establishing operational bases in critical biodiversity areas, complying with relevant regulations.
- Ensuring our operations and value chain activities do not harm protected forests and species, avoiding deforestation and development in sensitive areas.
- When our operations involve necessary changes in land use, we assess ecological value loss and implement mitigation measures to achieve no net loss.
- Applying a mitigation hierarchy (avoid, minimize, restore, offset) to reduce ecological impact if the operational activities must be conducted in critical biodiversity areas.
- Actively engaging in biodiversity initiatives and conducting biodiversity risk assessments for our operational sites.
- Promoting biodiversity conservation concepts to enhance environmental awareness among stakeholders.
- Collaborating with value chain and stakeholders to support ecological conservation.
- Requiring supply chains to adhere to biodiversity-related guidelines and avoiding partnerships with suppliers contributing to biodiversity loss.
